$ brief

a shared memory that
keeps you accountable

All of your work happens in this box.

All of your work happens in this box.

```
>_ codex
refactor the auth flow and add tests

> 
```

All of your work happens in this box.

◆ cline

refactor the auth flow and add tests

>

You ran 50 agents today.
So what did you actually do?

? Was it the right thing?

? Did it move your goals forward?

And your agents don't
talk to each other.

Context needs a north star:
your objectives.

brief manages that north star.

```
# Get a job as an AI engineer
Priority: high
Why: it's the work I want to do every day
Done when: I sign an offer
Deadline: 2027-03-01
```

Every agent writes to brief.
Every morning, brief writes you.
